

Yaar, agar aapne ek baar sab kuch set up kar liya hai aur dependencies install kar li hain, toh laptop restart karne ke baad project ko chalana bohot aasan hai. Aapko sirf servers aur database on karne hain.

Aapko bas **2 terminal (PowerShell)** windows open karni hongi:

### Terminal 1: Database aur Backend start karne ke liye

1. Apna PowerShell open karein aur project folder mein jayen:

powershell

cd d:\automated-SRS-generator-main

2. Pehle apna Docker Desktop app open kar lein (agar automatically start nahi hua hai). Phir database on karne ke liye yeh command chalayen:

powershell

docker compose up -d

3. Ab apna Python backend server start kar lein:

powershell

python -m app.main

*(Is terminal ko chalta chhor dein, isko minimize kar lein).*

---

### Terminal 2: Frontend start karne ke liye

1. Ek **naya** PowerShell terminal open karein aur frontend folder mein jayen:

powershell

cd d:\automated-SRS-generator-main\frontend

2. Apna Next.js frontend server start karein:

powershell

npm run dev

---

**Bas ho gaya! 🚀** Ab apna browser (Chrome/Edge) kholein aur **http://localhost:3000** par jayen. Aapka project bilkul ready hoga!

Jab aapka kaam khatam ho jaye aur aap inko band karna chahein, toh dono terminals mein Ctrl + C daba k
